Classifying Music Producers and Composers

NLP Models Using Reddit Data -

Background and Data Science Problem

Music producers use Digital Audio Workstations (DAWs) such as Ableton

Composers use scorewriter software such as Sibelius

• DAW market size in 2021: **\$2.49 Billion**¹, with CAGR estimated at **9%**

 Problem: Using message data from persons interested in making music, determine whether they're a "Producer" or a "Composer" so that we can properly market software

Data and Methods

- We train classification models to guess whether a Reddit post came from r/composer or r/musicproduction
- Using **PRAW**, we scrape over 1000 posts from each subreddit
- We use posts' title texts and body texts to build "bag of words" models
 - URL preprocessing using Regular Expressions
 - Count vectorization
- Scoring based on cross-val accuracy; validation with test data accuracy

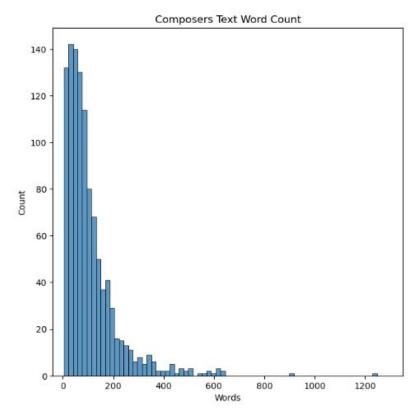

Example Post: Composer or Producer?

help with evolving

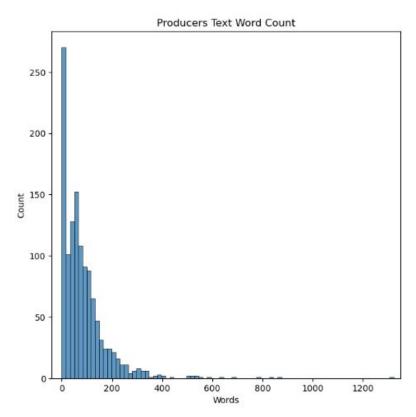

i have a problem. i can make a melody and so. but when im done with the melody, i often find it hard to continue on it. what do you guys do when you have something you wanna work on but dont know how to continue or what to do next?

Exploratory Data Analysis

EDA: Word Count

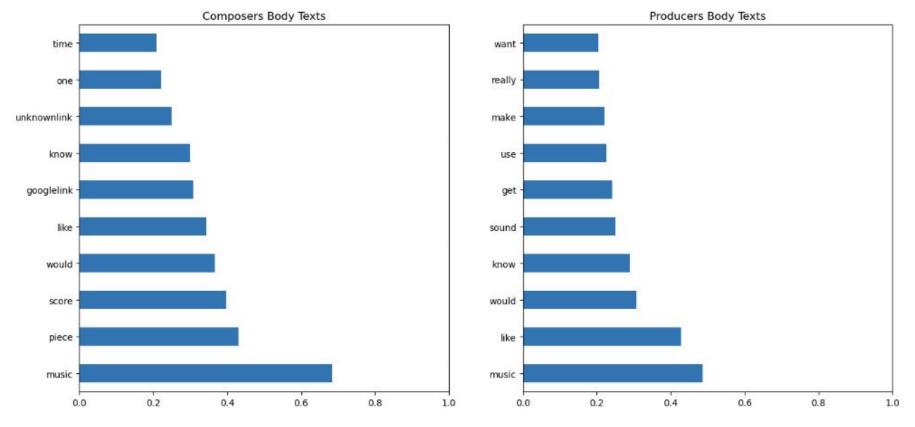

Mean: 106, SD: 108

Mean: 86, SD: 100

EDA: Most Common Words (after only URL processing)

x-Axis = Average Frequency Per Post

Modeling

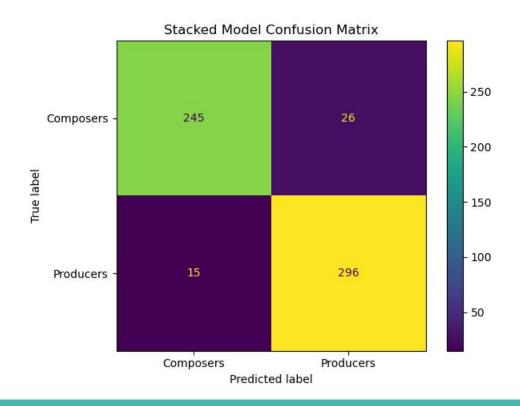

Modeling Techniques

- Gridsearch to tune hyperparameters
- Some methods of preprocessing/modeling helped a lot:
 - Preprocessing URLs: misclassification 1 15-25%
 - Stacking best models: misclassification ↓ 15%
 - Removing stop words
- Others did not help:
 - Stemming / Lemmatizing
 - TF-IDF word encoding
 - Adding bigrams
 - Including word counts as features
 - Considering only titles (no body text)

Best Models

Crossval Score Test Data Score Stacked Model 0.940325 0.929553 **Naive Bayes** 0.936311 0.917526 Random Forest 0.922524 0.914089 **Gradient Boost** 0.913938 0.908935 **Logistic Regression** 0.911074 0.903780

Test Data Classifications

Example Classifications (Stacked Model)

nstrument and what's a good library that carries this?

Looking for a virtual instrument like this. Can anyone tell me what it is (video link)

Looking to buy a a virtual instrument to whatever that is being played in video? Anyone know which i

Prediction ____

"Composers" (52.7%)

Example Classifications (Stacked Model)

help with evolving

i have a problem. i can make a melody and so. but when im done with the melody, i often find it hard to continue on it. what do you guys do when you have something you wanna work on but dont know how to continue or what to do next?

"Producers" (94.4%)

Room for Improvement?

Failed Classification (Stacked Model)

Question about Metropolis Ark 1 choirs

If anyone here has used Metropolis Ark 1, you'll notice the excellent choir samples, both Male and F emale. But the thing I wanted to point attention to is the Marcato and Staccato, where with each not e is punctuated with a different syllable, It doesn't seem to be "Do re me la...", and I just wanted to know if there's a specific name for this style of singing? Okay, obviously when you choose the no te it choses a random syllable, but it sounds impressive and I want to learn a bit more about it, an d if there's a way to notate such singing (or would you consider it chanting?)

Prediction

"Producers" (97.2%)

What went wrong?

Question about Metropolis Ark 1 choirs

If anyone here has used Metropolis Ark 1, you'll notice the excellent choir samples, both Male and F emale. But the thing I wanted to point attention to is the Marcato and Staccato, where with each not e is punctuated with a different syllable, It doesn't seem to be "Do re me la...", and I just wanted to know if there's a specific name for this style of singing? Okay, obviously when you choose the note it choses a random syllable, but it sounds impressive and I want to learn a bit more about it, and if there's a way to notate such singing (or would you consider it chanting?)

Rare in corpus (not selected as a feature) but <u>relatively</u> more common among Composers

Common among Producers

Frequency Ratio Analysis (among words that appear in at least 1% of posts)

Strong "Composers" Words

	freq_ratio
fugue	inf
sonata	inf
love	inf
theme	inf
piece	inf
score	inf
wind	inf
prelude	inf

Conclusions

Conclusions

 "Bag of words" NLP classification models can perform well with < 1000 data points in each class

 Potential music makers can be sorted into "Producers" or "Composers" with over 93% accuracy based on their Reddit posts

Tuning different models then stacking them improves performance

- Proper preprocessing is essential
 - URL processing for Reddit posts
 - Frequency ratios rather than overall frequencies?
